STUDY / 01

Study sheet

Observe. Understand. Think further.

01 Explore a question

Good questions begin with careful observation. Compare several examples and record what they have in common. A short text and a sketch help you organize your own idea.

02 From detail to connection

03 An explanation with evidence

First describe what you can actually observe. Keep that observation separate from your interpretation. What additional information would help you test the explanation? Finish by writing a new question.

Think about it

What stays the same when one detail changes?
